Before you start

Check components
- 1 x Channel
- 1 x 'L' bracket
- 2 x End caps
- 12 x Spacers for 1.1m channel OR
- 22 x Spacers for 2.0m channel

What you'll need
- Timber slats: 16mm or 19mm
- Button head screws
- Wall plugs (where required)
- Drill and screwdriver
- Tape measure and level
- Hack saw and hand saw

Step 1
Measure and mark up

Mark channel positions using a spirit level to check.

If required, use the slat calculator opposite to calculate the number of slats you will need.
Cut Screen Up to length if required.

Step 2
Install Screen Up channel

Insert bottom end cap and pre-drill the marked holes. Use fixings to attach the channels.

Position 'L' bracket at bottom hole and screw into place.

Handy Tips
- Oil, paint or stain your timber slats before assembly.
- For extra strength and longer spans a vertical brace is recommended
- To lock in slats turn top spacer sideways and screw through hole.

Side Fix

Rear Fix

Step 3
Finish with timber and spacers

Insert first timber slat, resting it on the 'L' bracket.

Insert spacers and timbers until you reach the top of the channel and finish with the top end cap.
